

ABHISHEK SASTE

AWS & DevOps Engineer | Cloud Infrastructure | Linux

Phone: 9309359629 | Email: abhisaste4822@gmail.com

Linkedin: [linkedin.com/in/abhisheksaste](https://www.linkedin.com/in/abhisheksaste) | GitHub: github.com/abhisheksaste31-source

PROFESSIONAL SUMMARY

AWS & DevOps Engineer fresher with hands-on experience in AWS cloud infrastructure, Linux administration, networking, storage management, monitoring, and application deployment through practical projects and labs. Skilled in designing highly available AWS architectures, configuring Linux-based web servers, and building containerized CI/CD workflows. Familiar with AWS EC2, S3, EBS, EFS, IAM, VPC, Application Load Balancer, Auto Scaling, Route 53, ACM, CloudWatch, Elastic Beanstalk, Git, GitHub, Jenkins, Docker, Terraform, CI/CD and Bash scripting. Currently preparing for the AWS Certified Solutions Architect – Associate certification.

TECHNICAL SKILLS

Cloud: Amazon Web Services (AWS)

AWS Services: EC2, S3, EBS, EFS, IAM, VPC, Application Load Balancer, Auto Scaling, Route 53, ACM, CloudWatch, Elastic Beanstalk, AWS Transfer Family

AWS Infrastructure: AMI, EBS Snapshots, Target Groups, Health Checks, Security Groups, DNS, SSL/TLS, Load Balancing, Public & Private Subnets

DevOps: Git, GitHub, Jenkins, Docker, Terraform, CI/CD, Infrastructure as Code

Linux: Red Hat Enterprise Linux, File Permissions, User Management, Process Management, systemd, Package Management, Disk Management, LVM, Filesystems, Mount Points, Log Management

Networking: TCP/IP, DNS, HTTP/HTTPS, Ports, Security Groups, Subnets, Load Balancing

Scripting & Tools: Bash/Shell Scripting, Basic Python, Apache, Nginx, Apache Tomcat, MobaXterm

PROJECTS

1. AWS Highly Available 3-Tier Architecture

Technologies: AWS, VPC, EC2, ALB, Auto Scaling, Route 53, ACM, IAM, CloudWatch, Linux

- Designed and deployed a highly available 3-tier web application architecture using AWS VPC, public/private subnets, EC2, Application Load Balancer, Target Groups and Auto Scaling.
- Configured Linux-based EC2 instances and deployed web applications using Apache/Nginx.
- Configured ALB listeners, target groups, health checks and routing to distribute application traffic across EC2 instances.
- Implemented Auto Scaling to maintain availability during instance health failures and changing workloads.
- Configured Route 53 for DNS-based access and AWS Certificate Manager for HTTPS certificate management.
- Configured IAM permissions and Security Groups to control access to AWS resources and application traffic.
- Used Amazon CloudWatch and Linux logs for monitoring, troubleshooting and operational analysis.

Project Repository: github.com/abhisheksaste31-source/aws-highly-available-3-tier-architecture

2. AWS CI/CD Pipeline with Jenkins and Docker

Technologies: AWS EC2, Git, GitHub, Jenkins, Docker, ECR, Terraform, Bash

- Designed and practiced a CI/CD workflow integrating GitHub, Jenkins, Docker and AWS infrastructure for automated application deployment.
- Configured Jenkins to retrieve application source code from GitHub and execute automated build and deployment stages.
- Created Docker-based application deployment workflows and practiced container image creation and management.
- Used Amazon EC2 and Amazon ECR for cloud-based application deployment and container image storage.
- Used Bash commands and scripts to automate Linux-based deployment and operational tasks.
- Practiced Infrastructure as Code concepts using Terraform for provisioning and managing AWS resources.
- Troubleshot deployment failures using Jenkins console output, Linux service status, system logs and application access logs.

EDUCATION

Bachelor of Science in Computer Science

Savitribai Phule Pune University | 2026 | Percentage: 72.73% | CGPA: 8.64

CERTIFICATION

AWS Certified Solutions Architect – Associate — Currently Preparing
